MagVenture TMS Therapy
Fighting depression. Together.

What is Transcranial Magnetic Stimulation (TMS)

TMS is indicated for use in people with major depressive disorder who have not responded to at least one antidepressant medication.* TMS has been recommended by the American Psychiatric Association since 2010.

MagVenture TMS Therapy consists of repeated cycles of TMS followed by rest periods. Diagnosis and initial session is performed by a licensed physician. The remaining treatment sessions will typically be conducted by trained staff under the supervision of the physician.

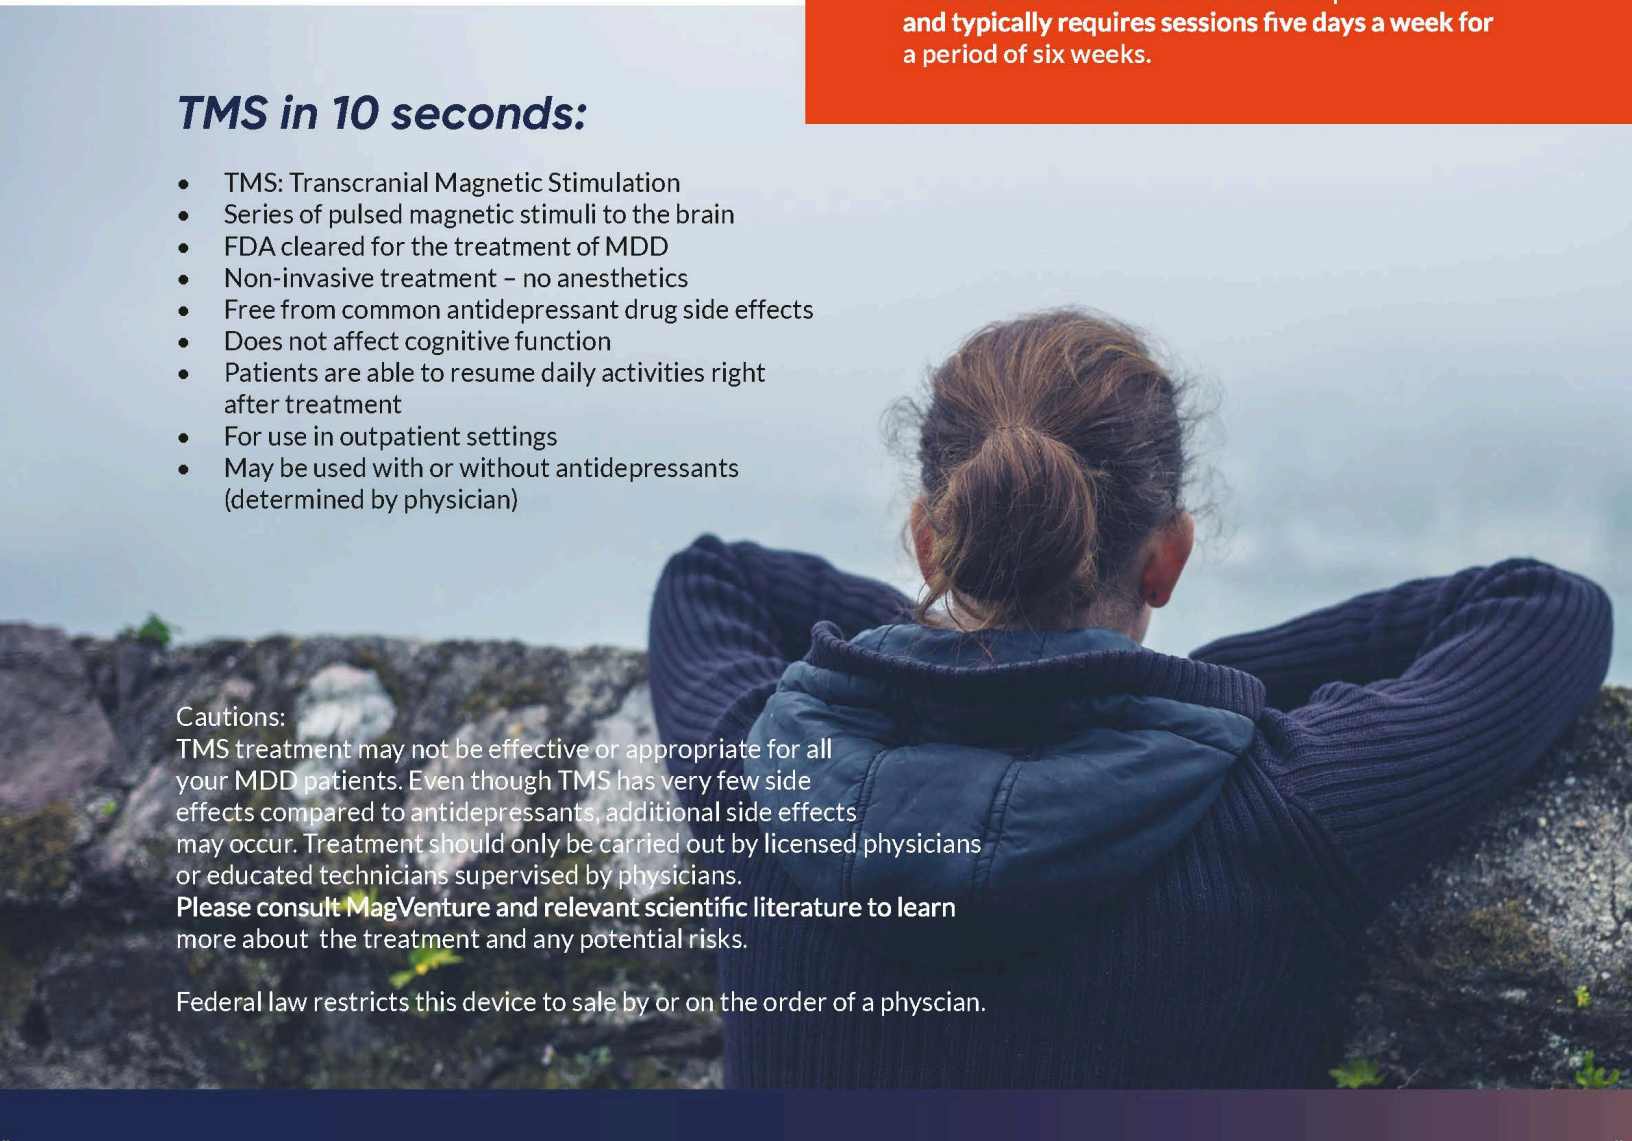

TMS is non-invasive and does not require any anesthesia. As there is no recovery period, people can immediately get back to their usual activities.

	Anti-depressants	TMS
Anxiety	•	
Blurred vision	•	
Diarrhea/constipation	•	
Dizziness	•	• (transient)
Dry mouth	•	
Feeling sick	•	
Headache	•	• (transient)
Insomnia/drowsiness	•	
Nausea	•	
Scalp pain		• (transient)
Sexual dysfunction	•	
Shaking/trembling	•	
Sweating	•	
Weight gain	•	

TMS treatment takes 19-37 minutes per treatment and typically requires sessions five days a week for a period of six weeks.

TMS in 10 seconds:

- TMS: Transcranial Magnetic Stimulation
- Series of pulsed magnetic stimuli to the brain
- FDA cleared for the treatment of MDD
- Non-invasive treatment – no anesthetics
- Free from common antidepressant drug side effects
- Does not affect cognitive function
- Patients are able to resume daily activities right after treatment
- For use in outpatient settings
- May be used with or without antidepressants (determined by physician)

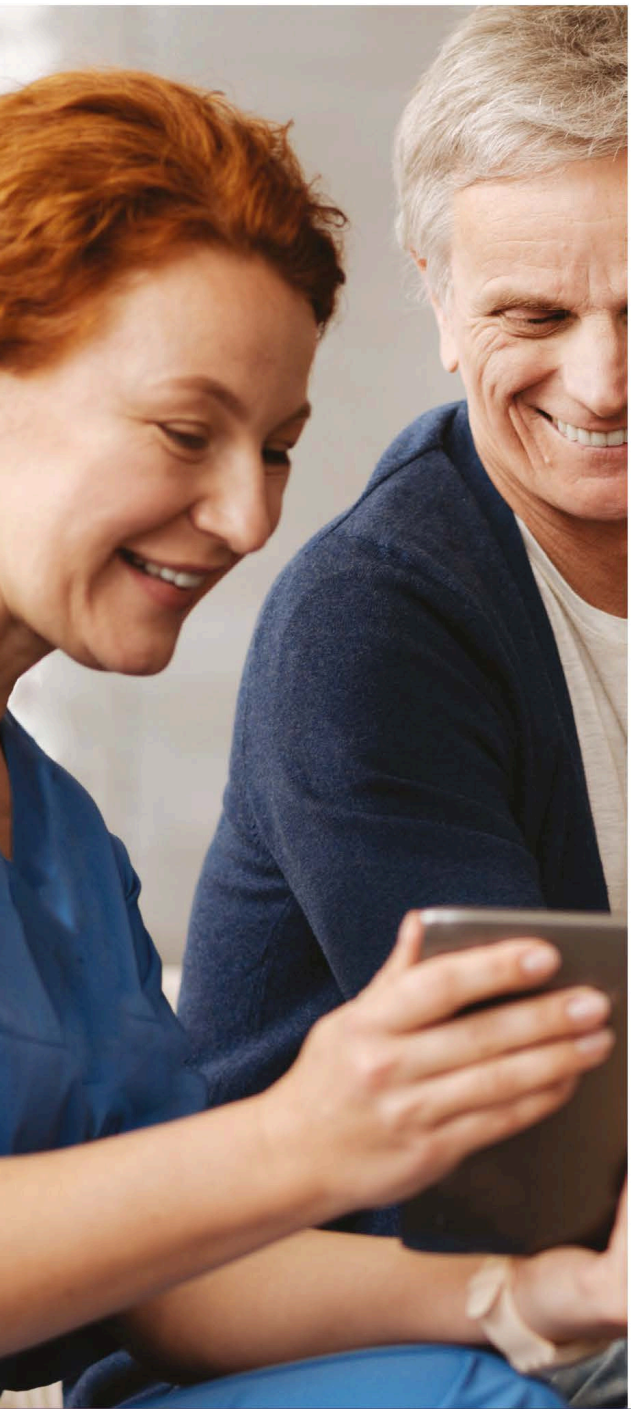

Cautions:
TMS treatment may not be effective or appropriate for all your MDD patients. Even though TMS has very few side effects compared to antidepressants, additional side effects may occur. Treatment should only be carried out by licensed physicians or educated technicians supervised by physicians.
Please consult MagVenture and relevant scientific literature to learn more about the treatment and any potential risks.

Federal law restricts this device to sale by or on the order of a physcian.

Why choose MagVenture TMS Therapy

Depending on your situation and how many patients you expect to treat per day, we have the right solution for you. We provide treatment solutions from entry-level – with smaller systems ideal for start-up or small clinics – as well as more advanced high-performance solutions suited for a very high patient throughput.

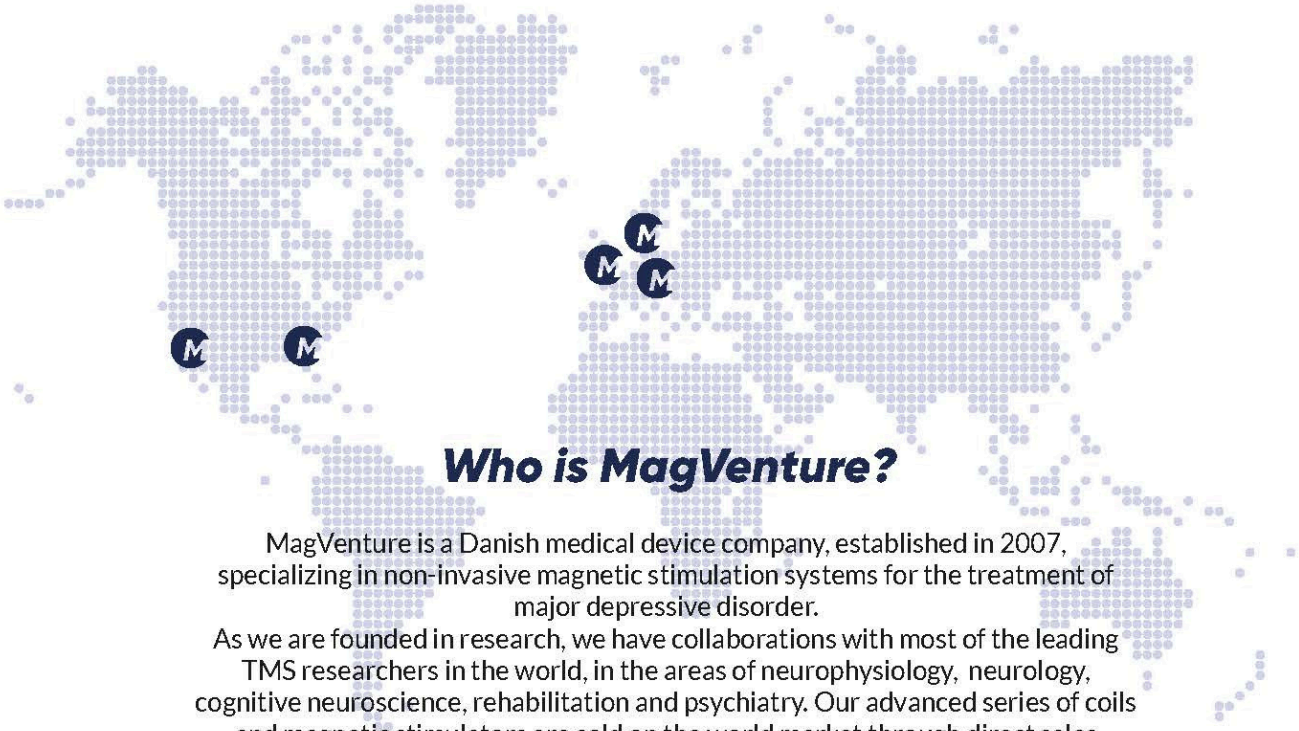

17 reasons why MagVenture TMS Therapy could be the solution for you:

1. Proven track-record of treatment efficacy, usability, and quality
2. One-off purchase with no pay-per-use fees
3. High patient throughput – liquid cooled TMS coil
4. Treatment time: 19 to 37 minutes per session
5. Pre-defined treatment protocols
6. Simple and accurate treatment spot determination
7. Cloud-based patient management system
8. Covered by most private insurance carriers
9. Upgradable for possible future FDA cleared treatment protocols
10. At least as safe and effective as other FDA cleared TMS devices
11. System setups for any practice size
12. Affordable financing options and fast ROI
13. Leasing options
14. Onsite installation and guidance
15. Onsite training of staff
16. Ongoing technical support
17. Ongoing marketing support

Manage, track, treat, and report with MagVenture's Patient Management system

Spend more time on your patients and less time on administration: With MagVenture's Patient Management System you can easily and safely manage patient data, track treatment, and generate reports for reimbursement purposes. All done in a user friendly system which is, off course, fully HIPAA compliant and developed in accordance with FDA cybersecurity guidelines.

Who is MagVenture?

MagVenture is a Danish medical device company, established in 2007, specializing in non-invasive magnetic stimulation systems for the treatment of major depressive disorder.
As we are founded in research, we have collaborations with most of the leading TMS researchers in the world, in the areas of neurophysiology, neurology, cognitive neuroscience, rehabilitation and psychiatry. Our advanced series of coils and magnetic stimulators are sold on the world market through direct sales subsidiaries in Germany, the UK and the USA, and through a global network of distributors in Europe, Asia, Middle East and the Americas.

Indications for use

* MagVita TMS Therapy is indicated for the treatment of Major Depressive Disorder in adult patients who have failed to receive satisfactory improvement from prior antidepressant medication in the current episode.

How to get started

All you need besides the TMS equipment is a dedicated treatment room and trained personnel. We will help you with everything from selectiing the right system for your needs, with financing options or leasing (if preferred), as well as full installation and training of you and any staff you might have.

Let's help you, help your MDD patients!
